

CPS at Glance

With CPS, you'll **involve students** and **inspire learning.**

CPS keeps your students engaged.

The Classroom Performance System (CPS) may be the best way you'll ever find to keep all of your students involved. It gives them a fun, interactive way to learn the material you're teaching. Plus, CPS provides you an easy way to monitor whether your students are answering the questions and understanding the lessons.

CPS consistently measures comprehension.

With CPS you'll always know if your students are getting it. When you ask a question during a lecture, CPS will instantly tell you the percentage who answered correctly. Plus, it helps you identify which students need extra help.

CPS increases classroom productivity.

Since you will instantly understand what material your students comprehend, you can focus on teaching what they don't know. No more wasting time covering material that is already understood.

CPS reduces administrative tasks.

No matter how you give your test—with paper, verbally, or on screen—it will be graded automatically. CPS enables you to spend less time performing administrative tasks and more time preparing your lessons.

CPS tracks performance against state standards.

eInstruction provides state standards for all 50 states. CPS allows you to link your test questions to these standards so that you can measure student progress without "teaching to the test."

You have several options for loading lessons, quizzes, and tests into CPS:

- Create your own with CPS's easy-to-use menus
- CPS's Content Search tool provides a graphic interface to search and download materials
- Use your existing Microsoft® PowerPoint® documents to create lessons or tests
- Access **ExamView®**-formatted questions from every major K-12 textbook publisher

eInstruction® is the global leader in the response pad industry, with over 3 million pads being used in all 50 states and dozens of countries worldwide.

The Classroom Performance System

Students use response pads to answer questions. eInstruction offers two varieties of response pads—infrared answers multiple-choice questions; radio frequency answers multiple-choice as well as numeric math and science questions.

A receiver attached to your computer, in combination with software, records and automatically grades students' answers.
